Lancaster Farming

VOL. 7 NO 15 [illegible] | Lancaster Farming, Saturday, March 10, 1962 | $2 Per Year

OUTSTANDING CONSERVATION FARMER, Abram S Zeiset, East Earl R1, spends some of his time during the winter months indoors taking care of his sows and newborn pigs. Here he checks one of his Spotted Poland China Sows and her Yorkshire crossbred pigs in a farrowing stall Sows and pigs are kept in the stall until the pigs are six-weeks-old and weaned. Zeiset also feeds steers and is planning to increase his sow herd from the present 12 to 24. He has 12 gilts nearing breeding age. L F. Photo

Conservation Farmer Likes Contour Rows

'I didn t know if I d like those crooked rows or not" is the way Lancaster County s Outstanding Conversation Farmer of 1961 explained his first feeling toward conservation farming

Abram S Zeiset of East Earl R1 contoured his farm in 1956 but only after much observation of some of his neighbors who had put soil saving practices on their farms earlier.

Zeiset who began farming on the home farm in 1952 says "Elmer (Elmer Sensenich Soil Conservation District Director) talked me into it but he didn't sell me on it" He said before he put the contours on his land he would get in his car and drive to a neighbor's farm after a rain to see how the rows were holding the water

I wasn't sure the strips would be worth the short rows Zeiset explained but after the strips were on the fields he found he had fewer short rows and longer rows

"My crops are definately better he said "But some of my neighbors think it is because I feed more cattle and have more manure to put on the ground'

Some of the yield increase is due to better fertilization practices Zeiset believes, but he says "I couldn t hold the manure and fertilizer on the

Brucellosis Retreating Extension Vet Declares

"We have to test 10,000 cows to find one with Brucellosis ' dairymen were told Tuesday at the second annual Lancaster County Dairy Day

Dr Samuel Guss, Extension veterinarian from the Pennsylvania State University said brucellosis in the cattle of the Commonwealth has reached the point of near eradication No Brucellosis could be found in three counties in the state he said

Dr Guss gave much of the credit to calfhood vaccination, as well as bloodtesting and slaughtering of reactors

"Tuberculosis presents another picture,' he said Real progress was made up to six years ago, but from 1959 to sixty the number of reported cases doubled and from 1960 to 61 almost doubled again

This is something we must make up our minds about, he said We have to decide to get busy and get rid of it entirely The farmer has become complacent and some testing has been hap-hazard in the past The state has paid $20 million in indemnities to slaughtered cows, he said

(Continued on page 7)

Secretary Henning Sees Program For Progress

You men should be encouraging more of the brighter boys to remain in agricultural positions, Dr William L Henning, Pennsylvania Secretary of Agriculture told Lancaster Rotary Club members and their farmer guests Monday

He said at present time, most of the good scholarship grants are going to the engineering schools and many of the brighter rural boys are going into professions off the farm

Dr Henning, speaking at the annual farmers day at the

DR. HENNING

club outlined the four-point program he brought with him when he took office in January 1955

Real progress is being made

7:30 p.m - Garden Spot

(Continued on Page 10)

Weather Forces Postponement Of S. C. D. Banquet

The annual banquet of the Lancaster County Soil Conservation District will be held this Monday night, March 12, at 6 30 p m in the Quarryville Memorial Methodist church The regular monthly meeting of the district directors normally scheduled for Monday night, will be cancelled

The banquet had originally been scheduled for Tuesday night, March 6 but was cancelled because of the snow and high winds that hit the county

The church is located at the corner of Second and Hess Streets, Quarryville

The progarm will include a report of the work of the district during the past year and a film "Fallout and Agriculture

In addition to seven Conservation Achievement Awards the district will name the Outstanding Conservation Farmer for the year A plaque will be presented to the associate director who has signed up the most new cooperators during the year

Red Rose Baby Beef & Lamb Club Hold Election And Beef Auction

Ground beef brought as high as $3 00 per pound Wednesday night

In an auction of frozen ground beef left from the steer purchased for the annual banquet of the county 4-H baby beef club, several of the parents began spirited bidding for the last pound of the 50 or so pound packages with the resultant price

Wilbur Hosler, last year's president of the club was the auctioneer of the sale that saw all of the beef sold to parents of club members at the close of the annual reorganization meeting Proceeds from the sale went into the treasury of the club

Robert Heilbron, president of the Lancaster Livestock Ex-

Broilers Gain Half-Cent

Broiler prices gained better than a half cent a pound during the week ending March 8th.

Volume was down somewhat as 35,675 head in 13 lots sold at prices of 18 5 to 20.5 for a sale average of 19 27 All broilers on offer were sold

One lot of heavy fowl containing 1,650 head failed to sell at the bid of 17.8, and two lots of 1,200 pullets were unsold at the bids of 23 3 and 24. A lot of pullets did sell at the price of 24.2 per pound for the 1,600 head. One lot of 400 heavy fowl sold at 20 2. A total of 5,300 roasters in four lots changed hands at 27 to 27 8, and one lot of 500 leghorn fowl brought 9.1.

The complete March 8 auction offered 48,085 head in 23 lots and sold 43,475 head in 20 lots

Following is the complete sale report with lot number, seller, grower in parenthesis, amount and breed, age in wks and days, buyer and price

● Delmarva-Georgia

Prices Lower, Demand Fair

Delmarva reported prices averaged approximately ½ cent lower with a fair demand for light offerings

Prices of 17 1 to 18 9 for the 881,200 head purchased at farms were reported during the 24 hour period ending 10:30 Friday morning

Very few plants were planning to operate Saturday Inquiry lacked aggressiveness and prices of ready-to-cook poultry were lower in instances

Estimated slaughter by Eastern Shore processors for the week end was 637,000 head compared with the 754,000 last week end the week end

The Delmarva broiler-feed for the week ending March 3 was up a full 5 points from the previous week This is the greatest difference in the broiler-feed ratio in any week period in over two years.

The ratio of 4 3 compared to 3 8 the previous week reflected a gain in average broiler price from 17 66 to 19 41 per pound and a drop from $92 42 to $90 37 per ton for 20 per cent mash

Georgia reported prices of 15 5 to 16 with most of the sales at 15 5 at farms during the 24 hour period ending 10 30 Friday morning

Demand was varied but generally fair and prices were mostly ½ cent lower

Estimated slaughter in Georgia for the week end was 1,735,000 head compared to 1 510,000 head the previous week

From Where We Stand . . .
The Law of Supply and Demand

A letter in our mail the other day said, "I am against quotas. If we would all stick together we could get the price of tobacco up to 40 cents a pound."

At a recent dairy meeting a dairyman expressed the idea that he didn't see too much wrong with price supports, but he was against anyone having the right to tell him how much milk he could produce.

Another dairyman said recently he was for letting supply and demand make the market with no help from any regulatory agency — government or farmer controlled He cited the poultry business as an example to prove that a segment of agriculture could survive without a regulation except by the laws of supply and demand.

Now we believe every farmer should have a right to think as he pleases, and he must have a right to say what he thinks, but we believe he should think the thing through to the end before he tries to sell a program to himself or anyone else

We certainly would not try to sell a program of tobacco acreage controls to tobacco farmers, but when the farmer said the price might go to 40 cents per pound if all tobacco farmers would stick together, he was just not being realistic

In the first place, if all farmers really 'stuck together" they would regulate themselves just as rigorously as government control proposed to do. Furthermore, while we are in favor of the farmer getting a fair return on investment, we do not believe he should seek outrageous prices, or he will soon be in a position of pricing his product out of a market

In any program, we believe farmers should ask what is just and reasonable, and not soar off into flights of fancy, or spend time in wistful thinking that they can ask for the moon and get it.

In the second situation, we believe there are too many farmers who want to have their cake and eat it too.

We know there have been some hard times on the farm. We have lived through some of them We know that even now many farmers are having a hard time meeting obligations on the high capital investments they are forced to make in this highly-mechanized business.

Many farm programs in the past, some good and some bad, outlived their usefulness or simply failed because of poor administration or because unscrupulous farmers sought loop-holes and padded their pockets at the expense of other farmers and the general taxpayer

Many of these programs were not allowed to die their natural deaths when they had outlived their usefulness, or when they were found impractical because some politicians — on both sides of the aisle — also found that it was politically expedient to keep the programs from dying

And because of these programs, there has grown up an attiture among too many farmers that a living should be guaranteed to any one who tills the soil whether he is a good businessman or not — whether he contributes to the well-being of the country or detracts from that well-being.

It is just not realistic to suppose that a price for a product should be guaranteed when no limit is imposed on the amount of production

As to the law of supply and demand and its relationship to the poultry industry, it could — and very well may — operate in just the same way for the dairy industry.

Admittedly, there were no regulations imposed from without, and prices are higher in the industry, but there are not nearly as many poultrymen as before

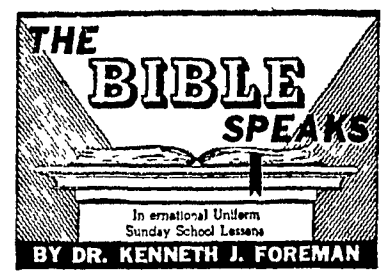
A hatchery representative told us last week that it is virtually impossible to sell a chick unless the hatchery will agree to wait for payment until the broilers are sold He went on to say that the only accounts of any size at their hatchery were contract growers who had little or no money in the business, but were really employees for large companies who paid the grower a stipulated salary for every thousand broilers produced

We can't help wondering how many dairymen remodeling their barns for more cows right now will be out of the business in five years from now, and of those still in the business, how many of them will be producing milk on contract to large corporations.

The law of supply and demand is a harsh law capable of throwing a market into complete chaos. When the market is confused, the consuming public tends to lose confidense in the product, and loss of confidence in agricultural produce is just what we mainly do not need

We do not believe the American farmer can afford to allow the dairy market, or any other agricultural market to be thrown into chaos — even if it requires amendment of the harsh law of supply and demand

At least that's how it looks from where we stand.



Bible Material Exodus 20 16, Matthew 12 ..-7 26 69-75, Proverbs 12 17.

Why Be Truthful?

Lesson for March 11, 1962

SOME people can't "see" Christianity at all. Others can see some parts of it. Hot arguments go on among the experts: Is the Christian religion something so special and different that a non-Christian cannot understand it at all, or is there some point of contact, something which doesn't call for a special revelation before a man can see it?

Dr. Foreman

Probably the Ten Commandments appeal to more "non-religious" persons than some other parts of Christianity. One of them we have for consideration this week as we have had others recently Thou shalt not bear false witness Or—turning it around as we can and must,—Thou shalt be truthful Who cannot understand this? Who wants a liar for a friend? Who wants to do business with a man who can't be trusted? Who wants to marry a person whose word means nothing?

Nothing that is not true

The main difference between the ordinary understanding of truth and the Christian standing of [illegible] thorough[illegible] what [illegible] look at only a few points. First, we believe that truth is not truth when it is mixed with falsehood. It's like passing a glass of mixed water and carbolic acid to a visitor and telling him, "Have a glass of water." It is water, true enough; but not all of it. The word "water" is a true word for half of what is in the glass, a fatally false word for the rest of it. Perhaps the most dangerous form of untruth is a mixture of truth and falsehood; for the part-truth makes people think the whole thing is truth. They will take the lie-and-truth much more easily than a lie alone.

Not everything that is true

Second, while it is not ever right to tell a lie (unless, some would say, there is no other way to save a life), it is not by any means always right to tell all the truth. At a funeral, if some kind words are being said about the deceased, it would be the height of ungraciousness to dredge up all the sins and failings on his record. If you have to write a recommendation it is only right to be perfectly truthful in giving your opinion of the applicant for the job. To recommend a person (however kind your motive) about whom you have some serious doubt, is no real help to any one. On the other hand if you know of some discreditable incident which has nothing whatever to do with Mr. X's fitness for this particular job, it is hardly right to tell it just because it happens to be the truth

Not just because it's true

If it's true, then tell it, is a poor rule That's what is wrong with gossip even when the gossip is factually true Truth can be told with bad intentions, with malice and resentment. There is an 'eleventh commandment" alongside the famous ten Thou shalt love thy neighbor as thyself. "Is it true?" is by all means one question to ask about anything you want to say If it isn't true, don't by any means tell it But if it is true there are other tests Is it kind? Is it helpful? Is it the kind of thing you would want others to say and spread around about yourself?

In the image of God

The Christian motive for truthfulness is unique Not that other motives are wrong It is good to tell the truth because people depend on you if you do It is good to tell the truth for its own sake It is good to tell the truth because that way you never get caught in [illegible]etwork of lies it is hard to [illegible]out of Yes, yes But the [illegible] reason for being [illegible]e are sons and [illegible] of the God of truth Two things we should always remember. One is that when God forgives sins, he "remembers them no more;" and when we forgive others, we should do the same, never dragging out of the past what we claim to have forgiven. The other thing is that we simply cannot deceive God. We can put on a false front for other people, but never for God. The God of truth knows the whole truth—about us.

MAX SMITH

To Observe Fertilizer Placement

With the trend toward heavier amounts of higher analysis fertilizer on most crops it is important to keep the seeds and the fertilizer from contacting each other Fertilizers containing either nitrogen or potash will burn most seeds and reduce or stop germination In most cases it is advised to put the fertilizer on separately from the seeds, or have it placed an inch or two to the side and one to two inches below the seeds or plants. When setting flower or vegetable plants the roots should not come directly in contact with a complete fertilizer.

To Treat Dairy Cows As Individuals

Many good dairymen will feed each cow as an individual animal and the amounts of hay, silage and grain will vary between animals some cows have the ability to make better use of large amounts of hay or grain and will give greater amounts of milk for this extra intake of feed nutrients Inheritance is a big factor and results in greater ability to convert feed and roughage into milk Good results may be expected by varying the feed-milk rations between cows in the milking herd

To Sow Spring Oats Early

If weather conditions permit, spring oats growers should try to get the grain seeded during the last week in March or the first week in April, this is the best time to seed oats in southeastern Pennsylvania for best yields. If oats are to be used as a nurse crop, then the seeding rate should be one bushel per acre without any legume seeding the rate is 1½ to 2 bushel per acre

To Spray For Wild Garlic

Early spring is the best time to spray pasture fields to

(Continued on page 5)

Probe Slated Into Fair Funds

HARRISBURG — The Joint State Government Commission will have the full cooperation of the Department of Agriculture in a proposed probe of the distribution of state funds to fairs for the payment of premiums Secretary of Agriculture William L Henning said today

In the closing hours of the 1962 session of the General Assembly the Senate passed a resolution directing the Commission to "make a study of the problem of distribution of premium money to fair associations by the Department of Agriculture

Expressing pleasure at the interest shown by the legislators Secretary Henning recalled that the 1957 Legislature at the request of the Department, increased the overall appropriation for this purpose from $100,000 to the present $110,000.

Allocation of the funds is governed by law the Secretary pointed out A major eligibility requirement is that fairs have available printed premium lists and file a statement of premium payments for a three-year period

The law specifies that not more than $1,000 may be allocated to any one fair and not more than $2,000 to any one county

"The funds are allocated to bona fide agricultural societies as prescribed by law ' Secretary Henning said "The purpose is to stimulate interest in the production of quality livestock grains fruits and vegetables We are especially interested in providing incentives for farm youth — the Future Farmers of America and 4-H Club members"

Use of the funds by fairs is limited to premium awards for exhibits of livestock and agricultural commodities

kill wild garlic; during mid to late March the growth of these onions will reach 6 to 8 inches and in this stage they should be sprayed with the esther form of 2,4-D at the rate of 3 pints per acre; this heavy dose of the material during March should cause little damage to any other crop and after a few years, the stand should be eliminated. Don't expect one spraying to give complete control

YFA Meeting Is Rescheduled

The Southeastern Regional meeting of the Pennsylvania Young Farmers Association, originally scheduled for March 6 has been rescheduled for March 20.

The meeting, planned to be held in the Solanco High School, but postponed because of the snow storm and closing of the school, will be held in the same place.

The program will be essentially the same as originally planned with most of the scheduled speakers participating, according to William M Fredd, advisor of the Solanco Young Farmers Chapter

Tractors Top Sale At Noll Auction

A tractor brought top price of $1,910 and another sold for $1,335 at the Harry H. Noll sale on Centerville Road, Lancaster.

Other prices paid included the following: Baler, $665, Hay crimper, $495; Hay drying fan, $445; Spreaders, $215 and $470. Cultipacker and a harrow, $312; Plow, $410; wagons, $177.50 and $400

Also: 1952 truck, $665, Bale elevator, $348; Hayrake, $110, Mower, $300, Grain drill, $225 Disc, $265, and $175, 2 Tobacco wagons, $250 each

A barn cleaner brought $910 tobacco laths sold for $5.10 per hundred, and a tobacco press brought $110.

Corn sold for $36.25 per ton

Diller and Kreider were the auctioneers.

"The man who's waiting for something to turn up might start with his shirt sleeves."

GRADE HOLSTEIN GROSSES $800

A grade Holstein cow topped the Albert H. Fritz estate—Earl H. Harnish herd dispersal sale Thursday at $800

The top selling registered Holstein brought $780.

In other bidding, 27 grade Holsteins averaged $423 a head, 19 registered Hosteins sold or an average of $552, six registered bred heifers averaged $429, and 10 registered and grade Guernseys brought a $321 average

Eighty-five head of dairy cattle, including 73 Holsteins, were auctioned at the Quarryville R2 dispersal

Everett Kreider called the sale Carl Diller read pedigrees

12-ACRE EPHRATA R2 FARM BRINGS $50,100

A 12-acre Ephrata R2 farm sold for $1,200 an acre or a total of $50,100, during a public sale Thursday

The property was sold by Ammon E and Elva Snyder to Benjam F Hoover New Holland R1

Cows brought $166 to $305 a head milker, $210 milk cans, $5 to $10, corn $35 a ton, manure spreader $365 feed house, $180, wagon, $225, tobacco planter, $195 lime drill, $165, 6,000 tobacco lathe, $160 a 100 Frank L Stoller and Chester K Lowe were auctioneers

By C. A. DEAN, M.D.

MEDITORIAL: A reader writes that her son has staphylococcus of the nose, and she would like to know more about this infection How is it contracted? Is it contagious? Can it be cured?

The staphylococcus is one of our most common bacteria It is found everywhere—in the air, on our skin, etc. There are several types of staphylococcus germs, some more virulent (able to produce infection) than others The non virulent (mild) type is the one responsible for pimples and small boils The more virulent types result in repeated (infectious) boils pneumonia and blood poisoning

In recent years it came to light that our hospitals were having problems with staphylococcus infections Unfortunately most of our antibiotics do not have any effect on this germ, so it is able to spread easily even where antibiotics are used in great amount With antiseptic techniques, however, the threat of staphylococcus infections in hospitals has greatly diminished.

As for staphylococcus infections of the nose, the upper lip, nose and surrounding flesh form an unusually serious area for infections The reason for this is that there are no nearby lymph nodes (as there are everywhere else in the body) for the infection to spread to and be trapped, and the only place the infection can spread is deep into the head Prompt, special treatment is needed to prevent such a complication. This type of infection is not contagious, it is usually cured with adequate treatment.

Infections of the nose most commonly result from pulling a hair out from inside the nose. All such hairs should be cut and never yanked out by their roots.

NEWLY ELECTED OFFICERS OF THE Red Rose Baby Beef and Lamb Club pose after their election Wednesday night at the Brecht School, Lititz Pike. They are, first row, L to R, Elvin Hess, president; David Denlinger, vice president; Janet Frey, secretary, Carl Weaver treasurer, Linda Denlinger, and Wilbur Hosler, song leaders. Second row, L to R., Eugene Hosler and Kenneth Weaver, news reporters, and Billy Hackman and Rose Marie Linton, game leaders

change explained the function of the exchange to the club members He pledged the cooperation of the exchange in arranging and planning forthcoming shows and sales of club calves

Also on the program was Fred Campbell, president of the Lancaster Union Stockyards Company He told club members it is important to do things on time in the cattle business

Members elected a slate of officers and club leaders for the coming year

Elvin Hess, Bareville R1, was elected president to replace Wilbur Hosler who was named song leader aong with Linda Denlinger

Other officers elected were David Denlinger, vice president, Janet Frey, secretary, Carl Weaver, treasurer, Billy Hackman and Rose Marie Linton, game leaders, and Eugene Hosler and Kenneth Weaver, news reporters

Two new adult leaders were elected and four were re-elected J Harold Frey, Marietta R1 was elected to his first term, as was Melvin G Rohrer, Lititz R3, while those returned were Jay R Nissley, Manheim R4, Mylin R Good, Manheim R1, Elvin Hess, Jr, Strasburg R1, and Fred W. Linton, Quarryville R2

Victor B Longenecker, Elizabethtown R3, a leader of the club for many years was made an honorary leader of the club

● Hiring Days

(Continued from Page 1)

Bureau Building on Roseville Road Lancaster, on March 8

Farm Hiring Days have become a yearly event in the county, and many farmers use the opportunity to line up help for the coming planting and harvest seasons

Anderson said that the hiring days would furnish opportunities for farmers and farm workers to meet for hiring interviews Farmers looking for farm workers but unable to attend any of the days scheduled could phone the Lancaster Local Office and give information concerning their farm labor needs

All the Farm Hiring Days will begin at 1 30 p m and end at 4 p m There is no fee charged to farmers or farm workers for the service

● Conservation

(Continued from Page 1)

fields without the strips"

The Conservation Farmer who is an associate director in the county district has planted corn after corn for several years and sees no ill effects.

He plants rye grass in the corn fields, but has very little success getting a stand He feels it is because the thick plant population shade the ground so heavily the grass can not establish itself However, he does plant grass strips between corn strips wherever possible.

More grass on the farm has been planted on the low meadows Here Reed's Canary grass was established last year and harvested for hay Zeiset does very little pasturing of cattle buying 60 to 100 head of cattle at a time and feeding them for a relatively short period He generally buys 800 to 900 pound cattle and tops out the pen when he thinks they will hit a good market

Plans for the near future include a farrowing house for about 14 sows at one time Zeiset plans three farrowings per year and has 12 gilts nearing breeding age to increase his present sow herd to about 24 head He produces crossbred pigs which he fattens for market

In the cropping program in addition to the 25 acres of corn, of which seven acres are on land rented away from home Zeiset raises 11 acres of tobacco as well as wheat and hay He farms the home farm of 18 acres plus 10 acres away from home

'I have never been sorry I put in the strips,' he says 'I am only sorry they were not put in many years before'

● Brucellosis

(Continued from Page 1)

In speaking of other cattle diseases Dr Guss said most of them come from the number of cows dairymen are trying to handle with the facilities they have He said one of the newer diseases which could become serious among dairy cattle is Johnes Disease It is a calfhood disease directly tied up with sanitation characterized by scours The disease is contacted by the animal before four months of age and is most often fatal when the heifer freshens Whole herds can be wiped out by the disease.

Ivan Parkin told the 250 dairymen present (in spite of the snow and high winds) 'I believe 75 per cent of the herd problems with mastitis comes from bad milking practices

A new type of Bronchial Pneumonia has been becoming more prevalent and Dr Guss says he is expecting it to become a more severe problem especially here in the Southeastern part of the state if the summer is hot and dry The disease Infectious Bovine Rhinotracheitis is a serious problem in Maryland, he said

Dr Guss said 'Most diseases are not cattle diseases, they are diseases of mis-management

Parkin Extension dairy specialist from PSU, cautioned dairymen to disregard the gauge in the vaccuum line since many of them are not accurate but pay close attention to the regulator in the system

John Pepper extension entomologist cautioned farmers not to use either Dieldrin or Heptachlor this spring for the control of spittle bug or alfalfa weevil He said, "We fought a long time to get them approved for fall application now let's not mess it up'

The only thing approved for spring application is methoxychlor or Malathion he said "It is a poor substitute so don't shoot till you see the whites of their eyes

Pepper said a new residual spray for house fly control has given excellent control up to eight weeks in tests The spray Dimethoate has recently been approved for use in dairy barns and in milk houses, but should not be sprayed on milk utensils

We have no answer to the face fly he said A 0 5 per cent DDVP bait or Pyrethrums plus repellent will help a little, but it has to be a daily application he said

Joe Taylor, Extension Dairy Specialist said milk cow numbers are down nationally but not in Pennsylvania However production per cow is way up both nationally and in the state

In the first year of forage testing by the University dairymen making use of the service realized at $29 per cow increase in profits

Taylor believes Pennsylvania with a 7 700 pound average per cow has cows capable of producing 3 000 pounds per year more but traditional feeding methods makes it impossible for the cows to produce up to their inherited ability He also said the average size herd in Pennsylvania is 23 with 51 per cent of the herds having under 20 cows

Taylor said As long as a pound of feed will add a pound of milk it is profitable at todays prices

The Dairy Day was sponsored by the County Extension Service Robert Groff president of the association was master of ceremonies County Agent M M Smith was Dairy Day Chairman

● Secretary Henning

(Continued from Page 1)

he said, pointing to the apple marketing act of 1961 as the "most spectacular advance in the continuing campaign to promote the sale, distribution and consumption of Pennsylvania Farm Products."

An advisory committee is being set up with the industry financing the promotion and determining the course of the program. "What is happening in the apple growing industry may well serve as a guide for other commodities, Dr Henning said.

The four points of the program outlined were.

1. A real and effective promotion program for the distribution for the sale, marketing and consumption of farm products.

2 An effective control and eradication program for all livestock and poultry diseases and an equally effective plant insect and disease control program

3 Encourage an effective program of soil and water conservation for the benefit of all through county districts

4 Modernize the pure food laws and provide adequate enforcement for protection of the consumer — and this includes the revision of feed, fertilizer, pesticide, lime and similar laws.

"Although the soil conservation program is nearly 20 years old, in January, 1955 only 30 of Pennsylvania's 67 counties had established districts" he said

That number has nearly doubled Today there are 59 counties with districts leaving only eight counties to be organized. Over 95 per cent of the farm land in the state is in the organized counties, he said

With the expansion of the program has come the realization that the urban and rural populations have a mutual stake in the program.

The Secretary's appearance also included the showing of The State Department of Agriculture's latest soil conservation film, "Beyond Tomorrow." It is a realistic presentation of the accomplishments in the field up to the present time.

The benefits to the public, the economy from the eradication of livestock and poultry diseases was explained in detail.

The once devastating brucellosis in cattle is close to the irreducible minimum, and work of tuberculosis is coming along, but more needs to be done on this In 1961, the number of cases of rabies was at an all time low of 14

The current drive for the eradication of sheep scabies is meeting with greater succes than was anticipated The department is cooperating with the U S Department of Agriculture and the Penn State Extension Service

In 1954 the department checked 600 feed samples and the same number of fertilizer samples In 1961 1300 feed and 1500 fertilizer samples were checked by the inspectors. Plans are now being drawn for an all out attack on the Gypsy Moth, which has been confined to three northwestern counties. The plan is to remove this pest from the commonwealth.

"All these programs cost money, it is true", secretary Henning said; "The results achieved prove it is money that brings big dividends"

Spark Plug Voltage Varies With Speed

Why is it a tractor may run fine at low speed and "miss" at high speed? According to engineers from a national spark plug company, when an engine is idling and there is a very small amount of explosive mixture in the combustion chamber, the resistance against the spark jumping across the electrodes is low and probably only 4000 to 6000 volts will be sufficient to make a spark occur

However, when the throttle is wide open under heavy load compression will be higher due to the fact that there are more molecules of air and fuel mixture between the spark plug electrodes The resulting increased resistance can actually step up a spark plug's required firing voltage to as much as 20,000 volts

If any components in the ignition system are not in condition to handle this higher voltage requirement, the sparking current may not get to the electrodes with sufficient regularity to permit the engine to fire regularly under severe operating conditions — hence, the "miss" at high speed'

Distributor Cap

Distributor cap inserts are frequently overlooked as a source of high resistance, low coil output and — poor tractor engine performance in general.

It only takes a few minutes to remove each wire from its tower and inspect the inserts Frequently you'll find the insert badly corroded and eroded — a result of arcing due to the lead not making contact with the metal insert

If the damage isn't too severe, a wire brush can be used to remove the corrosion and eliminate resistance However, in many cases, the corrosion will have eaten away the insert and the cap will have to be replaced

Incidentally ,this same condition can exist at the spark plug ends of the cable if they don't make contact also at the high-tension lead in the ignition coil

Installing New Cables

When pulling new spark plug cables through a conduit or housing be careful not to scrape off the surface of the wire You may damage the hard outer coating and allow oil and water to affect the inner insulation

Ignition Coils

Never steam clean an ignition coil — unless it's hermetically sealed moisture may get inside and do permanent damage

Don't Use Sandpaper on Rubbing Block

Never file or use sandpaper on a rubbing block The rubbing block surface which bears against the distributor cam is burnished when it is manufactured and should never be filed or sanded, as this will destroy the hard, burnished surface and cause excessive wear the engineers say

It is not enough to do good one must do it the right way
— John Morley

Retiring Vet Is Honored By His Community

The community of Intercourse recently tendered a farewell dinner to Dr and Mrs Edward P Clark Dr Clark served the eastern Lancaster county area with his veterinary service since 1911, nearly fifty years He has now retired and they plan to move in with their son-in-law and daughter, Mr and Mrs J Richard Mylin 1303 West Healy Street, Champaign Illinois

The dinner was held in the Plain and Fancy dining room near Intercourse with about 250 persons in attendance.

The evening opened with the invocation and a message by Bishop Aaron F Stoltzfus, of Paradise R D 1 Elmer D Zimmerman served at toastmaster.

Martin A Diller presented a gift from the community, a two-tone wood desk plaque complete with gold horse, cow and dog figures and an appropriate engraved descriptive plate

Harold A Hess presented an honorary membership in the Intercourse Horse Thief Association also known as "the Intercourse Association for the

DR. CLARK

detection of Horse Thieves and Other Thieves"

The committee arranging the dinner under the auspices of the Intercourse Civic Association was Elmer D Zimmerman, Martin A Diller, Harold A Hess, Gordon E Kling and Robert C Burnley The Civic Association is headed by Harry C Diller president, Harold A Hess vice-president Mrs William Waldrop secretary and Robert M Myers treasurer

Farmers Grow Today's Crop For A Purpose

University Park, Pa — Today's modern supermarket is far different from the corner grocery store of a few years ago. Food store shelves now contain thousands of new and different items — more than 5,000 products compared to 1,000 or so found there a few decades ago

Why do we have so many new products? Dr Russell E. Larson, director, Agricultural Extension Service, says it's because consumers like them and buy them Agricultural scientists, alert to consumer's wishes, develop new products to fit special purposes

Seven of every 10 crop varities grown today, were unknown just 20 years ago. Many were developed with a specific use — and the consumer — in mind.

Consumers like potatoes baked, mashed, French fried, and many other ways Market researchers learned the best qualities for different uses, and crop scientists developed varities with those qualities

The good taste and texture of the bread we eat doesn't "just happen," Dr. Larson explains Good bread is baked from flour with special baking qualities So our scientists developed wheat varities yielding this kind of flour

Most of today's frozen foods are tailor-grown to serve consumer wants Agricultural scientists are continually perfecting new varities of peas beans sweet corn, strawberries, other vegetables and fruits Their goal is a food that will keep its farm-fresh flavor, color, and texture during freezing

Consumers wanted a small meaty turkey to fit the oven and pocketbook of an average-size family Researchers produced the Beltsville small, white turkey. Now one of every five grown in the U S is a small Beltsville, and we're eating turkey the year around and more than ever before

The modern, meat-type hog was developed to meet consumer demand for leaner pork. The lower fat content in this new model hog means more protein — fewer calories

Wash-and-wear cotton is another product designed with the consumer in mind New long-staple varities and resin finishes give cotton wrinkle resistance and lighten the homemaker's ironing chore.

Cotton can also be made resistant to flames, oil, and water, opening the way to many new industrial uses.

Woolens that wash without shrinking and dry without wrinkling are another product of research benefiting the consumer. These treated fabrics retain wool's original soft texture

Civil defense needs have received researchers' attention, too They are developing a method for removing strontium 90 from milk, assuring us a safe and palatable milk supply in the event of nuclear attack

For stockpiling food in fallout shelters, a new whole grain water has been developed This compact, long-lasting emergency ration has an estimated shelf life of 5 years or more

Dr Larson credits agricultural scientists with giving us more than improved foods and fibers They are responsible for the aerosol "bomb" the antibiotic streptomycin and dextran, a blood plasma substitute

In some instances, researchers developed a completely new crop to serve industrial and consumer uses Soybeans are a good example Less than 30 years ago, soybeans were still being tested to determine their best use in this country. Now they are an important U. S. crop on more than 27 million acres and are a primary source of food oils and oils for industrial use

What about the future? Researchers are already at work to give us beef cattle with more lean, tender beef; dairy cows producing milk with more solids and less fat; hens laying eggs with longer lasting fresh qualities. Frozen French-fried sweet potatoes, citrus and vegetable juice powders retaining fresh fruit flavor and aroma are on the way. Dr. Larson concludes, "These and many more food products — products for a purpose — will be common on tomorrow's grocery shelves"

"People who have no money to speak of just have to do their own talking."

COMPLETE DISPERSAL SALE

Of Entire Herd Of 63 Head

Holstein Dairy Cows

FRIDAY, MARCH 16, 1962

12 noon

Located at Talotia, Pa 6 miles West of Oxford, Penna 12 Miles South of Quarryville. Between Route 472 and Route 272 in Little Britain Township, Lancaster County, Penna.

Honey, a Favorite

Liquid honey probably the most familiar form is honey extracted or strained from the comb, explains Catherine Love, Penn State extension consumer economics specialist Many stores also sell creamed honey, a semi-solid version of liquid honey, with a soft, spreadable consistency Comb honey taken right from the beehive and conveniently packaged for family-size needs, is often referred to as cut-comb, hunk, or chunk honey, depending on the size or shape of the piece of comb

Stoltzfus Holstein Has 885 Lbs. Butterfat In First 305 Day Test

The highest 305 day lactation record recorded by the Red Rose DHIA during the month of January was produced by Ellen, a registered Holstein cow owned by Mary B Stoltzfus Margantown

Ellen had a record of 19,171 lbs of milk and 885 lbs of butterfat and a 4 6 per cent test

Second high lactation was completed by a registered Ayrshire cow owned by Masonic Homes Farms Elizabethtown R Tina produced 18 173 lbs of milk, 754 lbs butterfat with a 4 2 per cent test in 305 days

The highest monthly butterfat average was made by a herd owned by Jacob K Stoltzfus Honey Brook R1 His herd of 26 registered Holstein cows averaged 1-732 lbs of milk 67 lbs of butterfat with a 3 9 per cent test

The herd of Conoy Farms of Bainbridge R1 placed second This herd of 31 registered Holstein cows averaged 1 663 lbs of milk 66 lbs of butterfat with a 4 per cent test

Though Ellen owned by Mary B Stoltzfus was the only cow to produce more than 800 lbs of butterfat during the first 305 days of lactation three others registered over 700 lbs

R Tina Masonic Holmes Farms was high in the class with 754 lbs while Minnie owned by Stanley G Greiner produced 734 and Reba owned by J Mowrey Frey Jr produced 714

During the month six herds averaged 60 lbs or over of butterfat according to the association records

The herd owned by Jacob K Stoltzfus was high with an average of 67 lbs while Conoy Farms placed second with an average of 66 lbs

Tied for third place were the herds of Wilbur N Erb and Parke H Ranck each with an average production of 63 lbs The J Richard Keller herd averaged 62 lbs during the month while the herd owned by Hiram S Aungst produced 60 lbs

Forty-two of the herds averaged between 60 and 50 lbs during the month of January

Nut Producers Plan Program

University Park — As part of its edible nut improvement program the Pennsylvania Nut Growers Association today announced a third annual series of nut tree grafting demonstrations The Lancaster County meeting will be held Mar 23 10 a m, Kauffman's Fruit Farm Bird-in-Hand

George G Weber York association secretary, will conduct the demonstrations all of them open to the public The association's nut improvement program he said is being conducted with the assistance of the agricultural extension service and the department of horticulture of the Pennsylvania State University

Gideons Re-elect Lester Brubaker

Lester H Brubaker, well known farm machinery dealer, 350 Strasburg Pike, has been re-elected president of the local Gideon Association.

In a report it was revealed that last year the association placed 229 Bibles, 31,180 youth Testaments 100 nurse Testaments and 200 service Testaments

Others elected were Jesse Peters vice president, Edgar Breneman, secretary; Albert Landis, treasurer, and John Bell, chaplain.

The association's women's auxiliary also elected new officers They are Mrs. Lester Brubaker, president, Mrs John Bell, vice president, Mrs Lloyd Hershey, secretary, Mrs Earl Enck, assistant secretary, Mrs Robert Neff, treasurer, Mrs Samuel Heisley, assistant treasurer Mrs Grant Eaby, chaplain and Mrs Jesse Peters, testament secretary

Market Egg Producers!

Get Off to the Right Start!

Remember the saying,

"The Way the Twig is Bent!"...

Well, that applies to your pullets raised for replacements in the laying house Next winter's egg production costs and your flocks performance will be determined by the way you feed and manage your replacements right now. A cheaply built feed or a poor program will NOT save you money. Only top production, low feed conversion and low production costs per dozen eggs will pay off

Quite a number of our customers are getting unusually HIGH production this Winter with resultant LOW conversions and VERY LOW feed costs per dozen.

Needless to say they raised their replacements "by the book".

"FINEST SERVICE ANYWHERE!"

Officers of the Lancaster County Fruit Growers Association after their election Monday night are, seated L to R., Roy Erb, secretary and Wilbur Heller, president Looking on as Erb and Heller accept applications for membership in the organization are L to R., Martin Krimes, vice pdesident and Amos Rutt, treasurer.

Friut Growers Elect, Hear Spray Changes

Water based phosphate insecticides have been causing some of the problems orchardists have been having with their early sprays, John Pepper, Extension entomologist from the Pennsylvania State University told fruit growers Monday night

He said that the miscible oil sprays which are normally applied at the green tip stage in apple orchards are sometimes incompatible with some water based phosphates

Pepper told the Lancaster County Fruit Growers Association, meeting in the Farm Bureau building for their annual reorganization meeting, "We are recommending that the fungicide be left in with the oil in the green tip spray." He also told growers "I like to see the miscible oil put on with a fine mist rather than a coarse spray"

Pepper cautioned growers that Malathion on bearing apple trees is not approved Some growers may still want to use parathion, but insecticides such as parathion should not be used after bloom opens, he said because you do not want to kill the bees in the orchard

Pepper said the mite situation was bad last year and the entomologists expect it to be severe again this year "I think 'resistant' is a nice word to hide behind when we are not doing a good job of control he said

Pepper said the spotted mites, which overwinter as adults as compared with the European red mites which overwinter as eggs can be controlled if they are hit early enough and hard enough

He outlined a program of miscible oil in the green tip or delayed dormant stage with Guthion of Phosphamidon in the pre-pink spray, petal fall spray, and the first, third, fifth and seventh cover sprays.

He said rosy aphids were found in many county orchards last fall He cautioned growers to be on guard for a heavy hatch of rosy aphids this season

Pepper also said there may be a heavy hatch of the 17-year locust in 1962 He recommended Sevin for the control of the insect, and said tests have shown it to be effective for a period of about three weeks The spray should be timed when you see the first egg clusters, he said

Herbert Cole Extension Plant Pathologist from PSU, said the number one disease facing orchardists is Scab, with Fire Blight where there are pears, fruit rots and sooty blotch, and powdery mildew in that order of importance.

He said plant pathologists have found that in orchards

(Continued on Page 24)

K-137 KimberCHIKS...

10c to 34c MORE NET INCOME THAN OTHER MAJOR EGG STRAINS*

(35c more than average entry in 15 tests)

*Based on final reports in 1959-60 Random Sample Tests in Ariz., B.C., Calif., Fla., Ia., Minn., Mo., C.N.Y., W.N.Y., N.C., Pa., Tenn., Tex., Utah, and Wisc.

In the three 1959-60 tests in which the new K-155 Kimberchik was entered, it equalled the well-known K-137 in net income.

MORE FOR YOUR MONEY!

Here's why: The Wayne Pullet program develops chicks into vigorous pullets with strong frames, ready to lay at the proper time. You get higher production, more large and extra-large eggs, less prolapse and improved livability. Feed costs are low too, like those of Mrs. Robert Miller, Wabash, Ind., who housed 1,205 pullets at a feed cost of 56c each; or G. G. Wilson, Windsor, Ky., 1,025 for 59c; and O. N. McClung, Old Hickory, Tenn., 700 for 74c each.

Begin now getting "More for Your Money" the Wayne way. We have Wayne calf and pig programs too!

For the Farm Wife and Family

Saint Patrick's Day Special

By Mrs. Richard C. Spence

When it's time for the wearin of the green it's time for rosy corned beef Though in the spotlight on St. Patrick's Day, modern corned beef is favored from Ireland to Israel and back o America on a year 'round basis

Each nationality and each family, for that matter, have their own favorite foods that they enjoy with corned beef Some like sauerkraut, some like boiled potatoes, some like mashed potatoes Garlic enthusiasts may select a corned beef brisket with a garlic flavor in addition to the sugar cure

Plans for a big celebration or cozy family dinner are no problem for there's the perfect size corned beef brisket for any occasion Most popular for family meals are the two to five pound brisket pieces in vacuum sealed packages The wrappers are transparent flavor-tight and drip-free, designed to insure that all the meat's goodness reaches the table

A special glaze adds a party touch to the corned beef Cook a 3 to 4 pound piece of corned beef according to directions on the package Remove the meat from the water and drain well Place the corned beef in a shallow open pan Mix 1-½ teaspoons cornstarch, 2-½ tablespoons brown sugar ¼ teaspoon ground cloves and ¼ teaspoon dry mustard in a saucepan Gradually add ¼ cup water Stir and cook over medium heat until clear and thick (5 to 7 minutes) Spread over cooked corned beef Press whole cloves into the fat covering in the outline of a shamrock. Broil the corned beef until the glaze bubbles, about 5 minutes Slice and serve hot

The trick to carving a corned beef brisket is easy to master Begin by slicing at the narrower, thinner end of the brisket, always cutting across the grain When the direction of the grain begins to change about half-way through, the remaining piece of meat is turned so that slicing can continue across the grain Look at the lean side of the brisket to learn the direction of the grain or fibers of the meat Slices for buffet trays or main dish servings should be about 1/16 to 1/8 inch thick For corned beef sandwiches, the brisket is sliced paper thin and several slices placed in each sandwich

Corned beef brisket is boneless so plan on 3 to 4 servings to the pound

NEW ENGLAND BOILED DINNER

4 pounds corned beef brisket
6 medium onions
2 turnips, cubed
6 carrots, cut in half
6 potatoes, quartered
1 head cabbage, cut in wedges

Cover corned beef with water and simmer until fork-tender Do not boil Allow about 3 to 4 hours. About 1 hour before serving time, add onions Thirty minutes before serving, add turnips, carrots, and potatoes Cover and continue cooking. Fifteen minutes before serving time, add cabbage Uncover, continue cooking until all vegetables are tender Arrange vegetables around corned beef on warm platter

* * *

Sure to become an often used combination is corned beef simmered with mixed spices and dried fruits. The final flavor sparkle is achieved with a mixture of brown sugar and lemon juice spread over the fat surface of the corned beef and dribbled over the fruit just before slipping under the broiler to bubble.

FRIUT CORNED BEEF

3 to 4 pound corned beef brisket
Water to cover
1 teaspoon mixed spices
1 pound dried prunes
½ pound dried apricots
1 cup packed brown sugar
5 teaspoons lemon juice

Place brisket in a kettle and cover with water Add mixed spices and cover with tight fitting lid Simmer 3 to 4 hours or until fork-tender. Add prunes during last hour of cooking time Add apricots during last 20 minutes of cooking time

Place brisket on a baking sheet Arrange the fruit a-

Here is a chutney to serve with corned beef brisket

SOUR CREAM-VEGETABLE CHUTNEY

1 cup dairy soured cream
1 cup yoghurt
¼ cup chopped chives
¼ cup chopped onion
1 cup chopped celery
1 medium cucumber, chopped
1 large tomato, chopped
¼ cup chopped ripe olives

Mix all ingredients together. Chill and serve with corned beef brisket. Makes about 3 cups

* * *

If you are having a special celebration on St Patrick's Day you might like to use some of the following "Irish" recipes

SHAMROCK CAKE WITH BUTTER CREAM ICING

1 package prepared white or yellow cake mix or your favorite cake recipe

Bake the cake according to directions on package in two 9-inch round layer cake pans Cool cakes on racks 10-15 minutes Turn out onto cake racks, turn topsides up, cool Make a shamrock pattern from a 9-inch circle cut from double thickness of heavy-duty aluminum foil Place shamrock pattern on top of cake; cut around pattern with sharp knife, removing four small wedges to make desired shape Place shamrock pattern on top of second layer, repeat procedure. Spread Butter Cream Icing between layers, over top, sides of cake

BUTTER CREAM ICING

5 tablespoons butter, melted
3 tablespoons cream or undiluted evaporated milk
1-½ teaspoons vanilla
3 cups confectioners' sugar
Few drops green food coloring

Combine butter, cream, vanilla Add sugar gradually, beat until smooth Add green food coloring, blend well

IRISH RASPBERRY BUNS

½ cup butter
¼ cup sugar
1 egg yolk
¼ cup milk
3 cups sifted cake flour
1 teaspoon baking powder
½ cup raspberry jam
1 egg white slightly beaten

Cream butter, sugar together until light, fluffy Add egg yolk, milk, mix well Sift together flour, baking powder add in 2 additions, beat well after each addition Make 1-½ inch balls from dough, flatten each ball to ¼ inch thickness Drop ¼ teaspoon jam in center of each, fold in half, pinch edges to seal. Brush with slightly beaten egg white Place on cooky sheet covered with aluminum foil Bake 15-20 minutes at 400 degrees Makes 2 dozen.

* * *

O'REILLY'S DREAM BARS

Part One:

1-½ cups sifted cake flour
½ cup light brown sugar, firmly packed
½ cup butter, well chilled

Blend flour, sugar together Cut in butter with 2 knives or pastry blender until crumbly Spread evenly in greased 15" x10"x1" pan, press down firmly Bake 10 minutes at 375 degrees Remove from oven spread Part Two over top

Part Two

2 eggs
1 cup light brown sugar firmly packed
1 teaspoon vanilla
2 tablespoons sifted cake flour
½ teaspoon baking powder
¼ teaspoon salt
1-½ cups shredded coconut
1 cup nuts, chopped

Beat eggs, add sugar, vanilla, mix Sift flour, baking powder, salt together, blend with coconut, nuts Add to egg mixture, mix well Spread evenly over baked Part One. Return to oven, bake 20 minutes Cool slightly, cut into bars 2-½"x1" Yield 48 bars

IRISH COFFEE

½ cup sugar
4-½ cups hot strong coffee (amount made in 6-cup coffee maker)
½ cup whipping cream whipped
6 heavy glass goblets

Add 4 teaspoons sugar and ¾ cup hot coffee to each goblet, stir until sugar dissolves Top each goblet with approximately 2 tablespoons whipped cream, allowing it to float on top of coffee (Don't stir) 6 servings

A perfect accompaniment to any "Irish" dinner would be this Emerald Mold — perfect in flavor and perfect in color.

* * *

EMERALD MOLD

1 3-ounce package lime-flavored gelatin
1-½ cups hot water
1 1-pound 4-½-ounce can crushed pineapple, well-drained
1 teaspoon peppermint extract
1 envelope unflavored gelatine
¼ cup cold water
2 8-ounce packages cream, softened
½ cup sugar
2 eggs
½ teaspoon vanilla extract

Dissolve lime-flavored gelatine in hot water Chill until syrupy Fold in crushed pineapple and peppermint extract. Pour half of mixture into a lightly oiled 1-½-quart mold. Chill until set Soften unflavored gelatine in cold water. Dissolve over hot water Add to softened cream cheese Stir in sugar, eggs and vanilla. Beat until smooth Pour half

Best Food Buys

Blizzard Changes Food Market

That late winter blizzard early this week disrupted our communications and caused temporary interruption of normal supply lines, reports Tom Piper Penn State Extension Marketing Agent Heavy rains and freezing temperatures in California, Arizona and parts of Texas have caused serious damage to produce crops

Lettuce has been frozen to the heart in some sections As a result, higher prices and poorer quality lettuce is expected in the weeks ahead supplies on hand or in transit, may be priced somewhat higher than last week As much as seventeen inches of rain has fallen in some celery growing areas halting planting operations Freezing temperatures have caused severe damage to early crops of cantaloupes and honey dew melons

Potatoes continue to provide an economical source of food nutrients Other fair buys include tomatoes radishes carrots rhubarb and musarooms

Apples remain plentiful and prices unchanged from last week Banana prices are higher as supplies are barely adequate to meet demand Grapefruit remains plentiful and at its peak in quality and flavor supplies of Valencia oranges are increasing and bringing lower prices Strawberries from South Florida are more plentiful too

Pork supplies are ample and various cuts including loins roasts fresh picnics and hams all provide promotional opportunity this week-end Fryer prices are lower than witnessed in recent weeks and turkey continues a good meat buy Beef supplies are ample check newspaper ads for sper features on chuck roasts or steaks

Consumer buying of fish and shellfish will be at a seasonal peak during Lent Although total supplies of frozen and canned fishery products are smaller than a year ago several individual items are in large supply Supplies of frozen haddock fillets fish sticks and portions and lobster are in larger supply than a year ago Frozen halibut cod fillets sole ocean perch whiting, scallops and crab meat are in good supply too Items in short supply and thus higher in price include shrimp sardines, and oysters

Pasteurized crab meat is a newly developed seafood item now available at many markets The process of pasteurization makes it possible to keep this meat at refrigerator temperatures for periods of three to four weeks

Large size eggs are priced lower than at any time since last fall, they provide a most economical source of protein Dairy products including cheese, are also in plentiful supply

17 Year Locusts May Be On Way

HARRISBURG — 1962 will be a locust year in Pennsylvania

The 17-year locust will appear in the Commonwealth about the first week in June right on schedule with Nature's calendar

According to the Bureau of Plant Industry State Department of Agriculture Brood II of the periodical cicada which made its last appearance in the state in 1945 will turn up in 16 eastern counties — Lancaster Pike Luzerne Carbon Monroe Schuylkill, Lehigh Dauphin Lebanon Berks, Bucks, Montgomery, Chester, Delaware, Northampton and Philadelphia

The 17-year locust is native only to North America There are as many as 30 different broods scattered over different sections of the United States There are at lease nine numbered of the species which appear at regular 17-year intervals in portions of Pennsylvania

The 17-year life span of the locust is spent underground where the nymphs or immature forms of the cicada feed on the sap of tree roots

The female cicada damages the small limbs of trees by her egg-laying habits She gouges out a row of punctures an inch or more long in the center of the limb The eggs are then placed at the bottom of the punctures Many such punctures may be made on a small tree, thereby causing considerable damage This damage is especially harmful to small fruit trees

The word "locust," which really means the grasshopper group, was applied to this group of insects by early Massachusetts settlers The brood appeared with such suddenness that the colonists thought a locust plague was upon them

Persons interested in protecting small trees from the pest should consult with their county agricultural agent.

INCREASE YOUR INCOME with

Mr. Poultryman, are you getting ready for profitable commercial operation in the years ahead?

As you know, some farmers are expanding flocks for more income; streamlining equipment and housing for peak of performance.

If you are thinking along these lines, ask us about the Purina high density plan It's a plan worked out by Purina engineers, Purina Research Farm specialists, and by field experience It answers questions you will want to know about bird density, housing, insulation, controlled environment, egg handling.

Drop by our store today, and prove to yourself Purina service helps you increase your income.

Science is working hard in Purina's modern laboratories

Science is working hard for you at Purina's modern, new laboratories, Checkerboard Square, St. Louis. Each month, some 25,000 quality-control tests are run on hundreds of ingredients and chemicals used in today's complex feed formulas. Exacting and time-consuming, yes . . but such work by Purina's dedicated team of scientists is one of the underlying reasons why Purina has led the way in better feeding methods for 68 years

Purina doesn't believe in experimenting with you, the customer. That's why its laboratory facilities were recently doubled in size . . to better assure you of top-quality ingredients and precision-formulated Chows worthy of the Checkerboard trademark. This modern laboratory is evidence, too, of Purina's desire to keep abreast of the very latest in animal nutrition to help you produce more meat, milk, eggs and wool more efficiently.

GET RID OF LICE ON YOUR HOGS

You can go after lice and fleas, help prevent the spread of sarcoptic mange and tone with Purina Hog and Cattle Dusting Powder. There's no need to worry about solving your hog problems. Hogs and cattle like Purina Dusting Powder, and don't scratch pens and corners to get it on their backs.

We've got Hog and Cattle Dusting Powder in the 25-lb. box parts of our Checkerboard Square, or in new 4-lb. bags to ask us to your Dust-it-Yourself Duster that comes with each purchase.

To stop lice and fleas dust your hogs with Purina Hog and Cattle Dusting Powder It's finely ground — gets down next to the skin where it does the most good

Potato Growers Hold Meeting At Potato City

COUDERSPORT — Pennsylvania potato growers were advised Wednesday that a proposed national potato order and agreement, combined with an acreage allotment program, "can achieve the desired aim of returning to the grower a more equitable share of what the consumer spends for food."

Robert I Aten, Macungie, Lehigh County, gave this opinion in explaining the proposed national program at the 11th annual Potato Growers Institute held by the Pennsylvania Cooperative Potato Growers Association at nearby Potato City Hotel

Pennsylvania potato growers traditionally have opposed Government controls and price supports Aten said my and all programs 'must be grower-proposed grower-designed grower-controlled, grower-operated and grower-financed

He added that 'this is a new approach and neither contemplates nor desires government price supports for potatoes

Potato production cannot be voluntarily controlled while acreages from government controlled crops are permitted to be planted in potatoes, Leland W Nixon of State College said

"By the same token," said the president of the Pennsylvania Cooperative Potato Growers Association, "cooperatives or any other marketing organization can never sell any more (potatoes) than the market demands" These views were contained in his message to co-op members at their 16th annual meeting Thursday

Nixon explained that these are but two facets of many inter-related complexes of modern day agriculture

Last year was one of surplus production of potatoes accompanied by disastrously low prices' which forced growers to ask "Where do we go from here?" Nixon said

In all probability, he said, growers in the near future will have a choice between continuums as they have, or still government control of production. He referred to the National Potato Advisory Committee recommendation for a national marketing order and agreement and acreage allotments on potatoes on which a series of public hearings start next week in New York City

Many Pennsylvania potato growers have suffered losses through internal sprouting' where the sprout turns into the tuber instead of growing out Recent tests on the phenomenon conducted at the U S Dept of Agriculture plant industry station at Beltsville, Md were reviewed by Dr P H Heinze of the Agricultural Marketing Service

Growers have expressed belief that the use of sprout inhibitors may be a cause of internal sprouting which ruins the tuber Dr Heinze said Beltsville tests have shown that potatoes untreated with one type of sprout inhibitor had a higher percentage of internal sprouting than treated potatoes held at the same temperature In all lots, treat

Penn State Lists Open House Day

University Park, Pa — Scientific developments in the biological and agricultural sciences will be featured March 17 during an open house to be held in the College of Agriculture at the Pennsylvania State University

The open house will feature lectures, demonstrations, and exhibits, announces Lyman E Jackson, dean of the College of Agriculture. Beginning at 10:30 a.m., visitors may attend a different program each hour on the half hour Open house headquarters will be the Conference Center on the campus

"The open house is designed to acquaint business and industry with research projects in biological and agricultural sciences" Dr Jackson points out "We also want to show young men and women the many opportunities for careers in these fields."

Featured topics will include biological sciences, animal sciences, plant sciences, agricultural business, education, and extension, agricultural engineering and physical science, and counseling for careers.

Exhibits will be featured in all agricultural buildings. Laboratories, greenhouses, livestock barns, and all other facilities will be open to visitors

The event coincides with the 100th anniversary of the land grant colleges and the 25th anniversary of the U. S. Regional Pasture Research Laboratory at Penn State.

Domestic Oats Not Good Buy

About 84 per cent of the home-grown oats sown in Central Pennsylvania are neither high in germination nor free from weed seeds, a recent survey shows.

One-third of the samples from 268 farmers drill boxes germinated less than 80 per cent, the standard set for quality seed says Harold C. Campbell, graduate assistant working on the project at the Pennsylvania State University Certified seed from commercial dealers averaged 96 per cent germination, he adds

Fifty per cent of the oats purchased from neighbors contained quackgrass — a weed prohibited in certified, quality seed Quackgrass was found in 37 per cent of the farmers' own seed No Quackgrass or Canada thistle seeds were found in certified seed from commercial dealers

Nearly one-third of all farm-grown samples contained noxious weeds such as buckhorn plantain, corn cockle, horse nettle, and wild garlic, Campbell points out His analysis was directed by economists and agronomists from the Agricultural Experiment Station at Penn State

Of oat varieties used, one-third of the farmers surveyed had mixtures or incorrectly identified the variety grown. Ninety-five per cent of the farmers followed Penn State recommendations for varieties best suited to their farm

"Farmers in the survey could have increased greatly their oat yields by testing their seed for germinating ability prior to planting — and planting according to the results," the survey team points out "Using quality seed is a very minor part of the total cost of growing a crop"

Farm Women 1 Hear Editor Of Almanac

The Society of Farm Women number 1 got the inside information on one of Lancaster County's traditions at a recent meeting

G S Lestz, head of Baer's Almanac spoke on weather forecasting at a meeting of the society in the home of Mrs. Clinton Rohrer, Lititz R2

Approximately 25 members attended the meeting and voted contributions to the American Bible Society and the Lititz Public Library

Mrs Elizabeth Hepp was made an honorary member of the society, Mrs Joseph Russell was received as a new member

The society will entertain society 13 at a meeting, Saturday, April 7, at 1 p m in the Lititz Recreation Center.

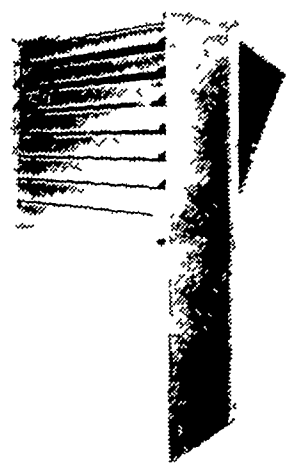
Keep Your Cows or Poultry in Ideal Producing Condition
with
MARTIN MULTI-SPEED VENTILATING SYSTEM
AIR - CONDITIONING FOR BARNS

VENTILATION FACTS - - -

- Cows need more pounds of air every day than the combined weight of feed and water.
- Poultry diseases are better controlled and prevented when litter and air is kept dry.
- Cows produce best at temperatures of about 50 degrees
- Fresh air movement aids in curbing respiratory problems.
- A cow gives off almost 2 gallons of water daily in breathing - automatic ventilation removes this excess moisture from the barn
- Thermostatically controlled, automatic louvers provide better working conditions in the barn.
- Moisture removal from the barn incraeess life of building.



3 SIZE FANS:
24" - 30" - 36"

OUTSTANDING FEATURES - -

1. Electronic Brain Principle Controls Both Louvers and 2 Speed Motor
2. Two Speed Motor Reduces Operating Cost
3. Ball Bearing Motor & Pillow Blocks
4. Life Time Lubricated (no oiling necessary)
5. Motor is Located in Air Stream for Cooling Running
6. Belt Driven Blades Designed for Hi-Volume Air Delivery on Minimum Current Consumption.
7. Large Intake in Air Stream
8. Compact Construction (no projecting parts)
9. Reversing Switch as Standard Equipment
10. Complete With Cord and Plug
11. Bottom telescopes for easier installation

LUNCH BY MT. VERNON CHURCH

Farm Women 10 Host Husbands

Husbands will be the guests of Society of Farm Women number 10 at a party on Saturday, March 17 in the home of Mrs. Glenn Ressel, Quarryville.

Plans for the party were announced at the recent meeting in the home of Mrs. William Crawford, St., Kirkwood R1. Members answered roll call by telling, "How I spent my morning."

A covered dish luncheon was planned for the day the society sews cancer pads in the home of Mrs. Joseph Best, Rawlinsville The date is March 13.

Speaker at the meeting was Albert C. Pierson, field representative of the Lancaster County Unit of the American Cancer Society.

Miss Jean Kauffman, who will be sponsored by the society in the Miss Solanco Pageant was a guest

The next meeting will be held in the form of a luncheon meeting at noon Thursday, April 5, at the home of Mrs John Ferguson, Unionville Mrs Park Reinhart will be co-hostess After luncheon members will visit Longwood Gardens.

Stubbornness is more a sign of weakness than strength

Farm Women 20 Hear Talk On Money System

Mrs Titus Brubaker highlighted the recent meeting of Society of Farm Women number 20 with a talk on "The History of The U S Monetary System".

The meeting was held in the home of Mrs John S Habecker, Lancaster R1

Members answered roll call by describing old coins which they displayed at the meeting the oldest coins displayed were a 1787 penny and a 1799 silver dollar A quarter dollar gold piece was the smallest coin on display

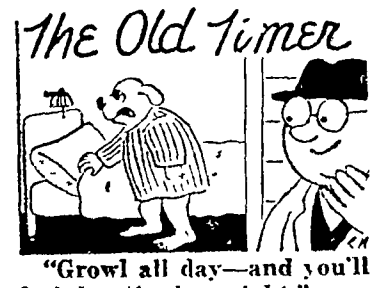
Mrs Fred D Aungst led the devotions A music program was presented by Mrs Habecker's grand children They were Edwin Weist, trumpet Randall and Natalie Weist violins, and Lynn Sheldon Piano

Members voted to contribute to Crispus Attucks Center and the American Bible Society

March was selected as the day for the bus trip to the Philadelphia Flower Show The bus will leave at 7 30 p m

At the next meeting on April 7, Mrs Amos Herr will speak on highlights of her European trip. The meeting will be held at the home of Mrs Clarence Reinhold, Lancaster R3.

The meeting was in charge of the president, Mrs F P Hodecker



"Growl all day—and you'll feel dog tired at night."

Two Day Beef Cattle Clinic To Be In County Next Week

The Pennsylvania State University Extension Service is conducting a two day beef cattle feeding clinic on Tuesday and Wednesday, March 13 and 14 in the Lancaster Poultry Center, 230 Bypass and Roseville Road. The program will feature morning and afternoon sessions, getting underway at 9 30 a m

Speakers will be Penn State Extension Specialists

The first day program will feature the following topics 1 Changes and trends affecting our beef cattle economy, 2 Types and grades of cattle, and feeding programs, 3 Health aspects to be considered by the cattle feeder, 4 Making the most of marketing and feeding information, 5 Feedlot layouts and equipment

The second day program discussions will include 1 Forage storage and handling 2 Grain storage and handling 3 Fundamentals of ruminant nutrition; 4 Forages in your feeding program, 5 Feed additives and supplementation

All county beef cattle farmers are encouraged to attend this session which is one of four similar sessions being conducted throughout the state

● Saint Patric's Day

(Continued from Page 15)

ot cheese mixture over gelatine layer in mold Chill until firm Repeat layers chilling after each addition Makes 8 to 10 servings

● Potato Growers

(Continued from Page 17)

ed and untreated, the average percentages of internal sprouting of potatoes in storage were 1.5 per cent at 50 degrees, 14.4 per cent at 60 degrees and 9 8 per cent at 70 degrees

"When blind people are treated like toher human beings," Helen Keller recently stated, "will be the time when Americans have fully understod that blindness is a way of life, not an end to it"

One thing that makes the wheels go round is the people who earn $5,000 per year and live on $10,000

Conservationist To Leave County

P. B. GUERNSEY DISPERSAL

Anthony Clemente, Owner, Salem, New Jersey

THURSDAY, MARCH 15, 1962 — 12:30 Noon, SHARP!

At the Ass'n. Sales Pavilion, 6 miles East of Lancaster, Pa. on Route #30.

80 HEAD - 50 COWS - 12 BRED & 18 OPEN HEIFERS!

10 fresh in Feb., 15 in March, 16 due in April.

Bang's and T.B. Cert. - Vacc. - Dehorned

We are greatly impressed with the uniformly outstanding udders in this herd.

Official records, many outstanding cow families make this one of the most attractive sales for the man who wants to add some good ones to his herd.

This is a predominately "Green Meadow" bred herd which has been developed through rigid culling and good management, into one of the top herds in New Jersey.

March Is National Egg Month

HARRISBURG — Ample supplies of eggs and the late Easter this year will combine to provide good consumer values during Pennsylvania March Egg Month, Governor David L Lawrence said today

Urging state-wide observance of Egg Month, sponsored by the Pennsylvania Poultry Federation the Governor point ed out that egg production begins to peak during March as new pullets come into production

Easter a time when eggs traditionally are used in large quantities in many homes does not occur until April 22 this year he said 'There will be a heavy supply of eggs available before that time

Eggs are second only to milk as the leading income to farmers in Pennsylvania During 1961 total egg production for the State was 3,329 000 000

The Governor also announced that a record number of 41 marketing organizations had qualified for the Pennsylvania Certified Egg Program and that several additional plant applications were being processed A total of 278,107 920 eggs were marketed under the blue seal plan last year

"Consumers can confidently take advantage of egg values during March Egg Month because our certification program and our store-level inspection work provide assurance that quality is being maintained the Governor said

"Every week in the year our egg industry is providing a nutritious, inexpensive food" he said, "and I welcome this opportunity to ask that citizens throughout the Commonwealth observe Egg Month

"Pennsylvania is first in the Nation in the volume of quality eggs graded for the retail market" he said "The industry is second in value of eggs produced, adding $118 882 000 to the State s economy'

Nursery Stock Certification Is Altered

HARRISBURG — A revised set of rules and regulations governing the inspection and certification of nursery stock is being distributed to Pennsylvania nurseries and retailers State Secretary of Agriculture William L Henning has announced

The new regulations are largely clarifying, the Secretary said, and actually simplify compliance

A major change relieves retailers from the obligation of including a certification tag with nursery stock exposed or offered for sale by them The certificate the retailer receives from the wholesaler together with invoices governing the purchase of the specific lot suffice

This eliminates a duplication The law provides that all wholesale lots lots to be forwarded by common carriers, and lots to be moved over state lines shall be tagged with a copy of the certificate The tags must include the valid certificate of the nurseryman making the original sale and must be displayed at each place of business

The exact copy of the certificate must be printed Any additions or erasures including the date will constitute an alteration and therefore a violation

'In the past there has been some confusion in the marketplace as to interpretation of the law said Dr Thomas L Guyton Director of th Bureau of Plant Industry The new rules are entirely in accordance with the Plant Pest Act of 1937 and are designed to simplify compliance thereby making enforcement more effective."

● Fruit Growers

(Continued from Page 13)

where scab is controlled, you have very little trouble with the others.

The secret is to do a good job of controlling the diseases in the early sprays and then keep after them all season If you wait until late in the season to begin it will be an uphill fight, he said, but don't think that you can put on one good spray early in the season and then forget it

He said there are no significant changes in the spray schedule from last year

In other business, growers elected H. Wilbur Heller of Berrydale Fruit Farm, Conestoga R1 to the presidency. He succeeds Amos Rutt of Shank's Fruit Farm, who was elected treasurer succeeding Daniel Br Baker. Rutt lives at 133 N. Prince Street, Millersville., Martin Krimes, 203 Ridge Ave, Ephrata, was named vice president Roy Erb, 118 Kreider Ave, Lancaster, was reelected secretary.

The upper crust has been defined as a bunch of crumbs held together by a lot of dough

M. Robert Barnett, Executive Director, American Foundation for the Blind, advises that when walking with a blind person have him place his arm on your arm. He further states that when entering a room with a visually handicapped person to describe where furniture, windows and doors are located, so that the blind person can move about more easily

Bananas were found growing on most Pacific Islands, regardless of isolation, when white men first arrived
